SUMMARY

I'm a full-stack developer with two years of production experience across Vue.js, React, and Node.js. I take ownership from component design through to deployment and try to write code the next developer will actually want to work on. Still learning - currently doing a Master's at RMIT - and that tendency to ask why carries into how I approach production problems too. I like breaking down a problem before jumping to a solution, and honestly the messier the bug, the more interesting the fix. I do my best work in teams where feedback moves both ways and shipping good software is a shared goal.

WORK EXPERIENCE

September 2023 - June 2024

CYGNET INFOTECH | ASSOCIATE SOFTWARE ENGINEER

- Enhanced and maintained a Vue.js tax compliance platform used by large enterprises for GST filing, improving form validation and UI feedback to reduce filing errors.
 - Built a reusable component library and implemented new feature modules with REST API integrations, reducing average feature development time across the team.
 - Led a full homepage redesign in collaboration with UX designers, improving navigation clarity and receiving positive stakeholder feedback.
 - Worked cross-functionally with backend and QA teams in an agile environment to deliver features end-to-end within sprint deadlines
 - Contributed to the Vue 2 to Vue 3 migration by integrating Vite, reducing build time from ~3 minutes to up to 70 seconds, a 60% improvement.
 - Proactively identified and resolved bugs under production deadlines, maintaining platform stability and a smooth user experience.
-

INTERNSHIP

January 2023 - June 2023

KNACKROOT TECHNOLABS LLP | FULL STACK DEVELOPER

- Built and shipped a blockchain-based crypto earnings platform targeting Web App and App store, contributing across the full stack within a team of 8–10.
 - Designed RESTful APIs and relational schemas with Node.js and PostgreSQL to handle secure crypto transactions.
 - Collaborated with designers, QA, and product stakeholders across the full release cycle, from feature refinement to deployment and maintenance.
-

SKILLS

- Language:** JavaScript, TypeScript, Java, Python
 - Frameworks:** React.js, Vue.js, Next.js, Node.js, Vite, React Native, Bootstrap
 - Database:** PostgreSQL, MongoDB, DynamoDB
 - Cloud & DevOps:** AWS S3, ECS, EC2, ECR, Docker, Vercel, Render, GitHub Actions
 - APIs & Auth:** REST APIs, WebSockets, JWT
 - Tools:** Git, GitHub, Sourcetree
 - AI & Tooling:** Cursor, Claude, ChatGPT, GitHub Copilot
 - Soft Skills:** Agile Delivery, Technical Communication, Cross-functional Collaboration, Ownership Mindset, Systematic Problem Solving
-

PROJECTS

ARTIFY-ART MARKETPLACE PLATFORM

NEXT.JS, MONGODB

- Built and deployed a full-stack art marketplace on Vercel with MongoDB Atlas, production environment configuration, and health-check endpoints.
- Implemented role-based authentication using NextAuth.js and bcrypt for artists and customers with distinct workflows.
- Developed a responsive, mobile-first UI with Tailwind CSS and shadcn/ui, featuring pagination, filtering, modals, and loading skeletons across 10+ pages.
- Created RESTful APIs with Zod validation for secure, type-safe handling of artworks, commissions, and user authentication

CHAT APPLICATION

REACT, NODE, WEBSOCKET

- Engineered a full-stack real-time chat platform supporting multi-user rooms with live messaging, typing indicators, and online/offline presence tracking using native WebSockets.
- Designed a custom WebSocket protocol with JWT authenticated connections and in-memory room management, supporting up to 100 concurrent users per room.
- Built a RESTful API with paginated message history, compound-indexed MongoDB queries, and JWT/bcrypt authentication middleware.
- Deployed frontend on Vercel and backend on Render with MongoDB Atlas, including cold-start mitigation via health-check polling and keep-alive pings.

AWS MUSIC SUBSCRIPTION PLATFORM

REACT, NODE.JS, DYNAMODB, S3, EC2, ECS, LAMBDA

- Deployed the same REST API across three AWS architectures - EC2 (Nginx + PM2), ECS Fargate (Docker + ALB), and Lambda + API Gateway - covering IaaS, containerised, and serverless models.
- Designed DynamoDB schema across 3 tables with composite sort keys, a GSI and LSI to support all query paths without full table scans.
- Secured all deployments using IAM least-privilege roles, ALB-to-task SG chaining, and presigned URL access for private S3 assets - no direct internet exposure across any compute target.

EDUCATION

RMIT UNIVERSITY

Masters of Information Technology

July 2024 - June 2026
Melbourne, Australia

LJ INSTITUTE OF ENGINEERING AND TECHNOLOGY

Bachelors of Information Technology

July 2019 - June 2023
Ahmedabad, India

CERTIFICATION

- Docker Foundations Professional Certificate - [Docker](#), [LinkedIn Learning](#)

HONORS & AWARDS

- Secured 2nd place in a competitive coding contest at LJ College, demonstrating proficiency in data structures, algorithms, and time-constrained problem solving.

REFERENCE

- Available upon request
