SUMMARY

I'm a full-stack developer who genuinely enjoys figuring out how systems fit together, from the database schema up to the deployment pipeline. During my recent role at Vision Verse Interactive, I took ownership of our backend setup and built the core Shopify and Stripe integrations our platform relied on. Prior to that, I helped maintain and upgrade enterprise compliance software using Vue.js at Cygnet Infotech. I'm very comfortable working across React, Node.js, and PostgreSQL, but I'm also deeply curious about infrastructure. To truly understand cloud architecture trade-offs, I spent my own time deploying the same backend across AWS EC2, ECS Fargate, and Lambda. I actively use tools like Cursor and Claude to build and review code more effectively.

EXPERIENCE

SOFTWARE DEVELOPER

February 2026 - June 2026

VISION VERSE INTERACTIVE (INTERNSHIP)

Melbourne, Australia

- Integrated Shopify publishing with order/refund webhooks, sync logs, inventory updates, and built Stripe subscription gating for Shopify access with admin controls and lifecycle notifications.
- Implemented a product re-approval flow that keeps live listings active while tenant edits await review, and improved inventory reliability across POS and Shopify with transactional updates and logging.
- Owned deployment setup, backend server configuration, database migration, and domain configuration across a React + TypeScript frontend and Node.js/Express + Prisma/PostgreSQL backend, while enhancing tenant and admin workflows for products, rentals, variants, images, and support messages.

ASSOCIATE SOFTWARE ENGINEER

September 2023 - June 2024

CYGNET INFOTECH

Ahmedabad, India

- Enhanced and maintained a Vue.js tax compliance platform used by large enterprises for GST filing, improving form validation and UI feedback to reduce filing errors.
 - Built a reusable component library and implemented new feature modules with REST API integrations, reducing average feature development time across the team.
 - Led a full homepage redesign in collaboration with UX designers, improving navigation clarity and receiving positive stakeholder feedback.
 - Worked cross-functionally with backend and QA teams in an agile environment to deliver features end-to-end within sprint deadlines.
 - Contributed to the Vue 2 to Vue 3 migration by integrating Vite, reducing build time from ~3 minutes to ~70 seconds, a 60% improvement.
 - Proactively identified and resolved bugs under production deadlines, maintaining platform stability and a smooth user experience.
-

SKILLS

- **Languages:** JavaScript, TypeScript, Java, Python
 - **Frameworks:** React.js, Vue.js, Next.js, Node.js, Express.js, Vite, React Native, Bootstrap
 - **Databases:** PostgreSQL, MongoDB, DynamoDB, SQL, Data Modelling
 - **Cloud & DevOps:** AWS S3, ECS, EC2, ECR, Docker, Vercel, Render, GitHub Actions
 - **APIs & Auth:** REST APIs, WebSockets, JWT
 - **Tools:** Git, GitHub, Sourcetree
 - **AI & Tooling:** Cursor, Claude, ChatGPT, GitHub Copilot
 - **Soft Skills:** Agile Delivery, Technical Communication, Cross-functional Collaboration, Ownership Mindset, Systematic Problem Solving
-

PROJECTS

BRIEF - PERSONALISED NEWS AGGREGATOR

NEXT.JS, TYPESCRIPT, POSTGRES (NEON), DRIZZLE, GOOGLE GEMINI, AUTH.JS

- Built a multi-source personalised news platform that ingests RSS and Hacker News feeds through normalised per-source adapters, with idempotent canonical-URL deduplication so re-polling never reinserts the same story.
- Engineered a self-learning feed that clusters the same story across outlets, tags topics via a keyword taxonomy with a Google Gemini fallback for new subjects, and ranks each user's stories by learned interest × freshness with a source-diversity re-rank.
- Implemented an up/down voting loop that updates a per-user topic-interest profile, plus on-demand Gemini summaries cached at the article level and shared across users to cut redundant AI calls. Secured signed-in access with Auth.js (email/password + Google/GitHub OAuth) and automated frequent ingestion via a bearer-secured GitHub Actions cron, deployed on Vercel.

AWS MUSIC SUBSCRIPTION PLATFORM

REACT, NODE.JS, DYNAMODB, S3, EC2, ECS, LAMBDA

- Deployed the same REST API across three AWS architectures - EC2 (Nginx + PM2), ECS Fargate (Docker + ALB), and Lambda + API Gateway - covering IaaS, containerised, and serverless models.
- Designed DynamoDB schema across 3 tables with composite sort keys, a GSI and LSI to support all query paths without full table scans.
- Secured all deployments using IAM least-privilege roles, ALB-to-task SG chaining, and presigned URL access for private S3 assets - no direct internet exposure across any compute target.

ARTIFY - ART MARKETPLACE PLATFORM

NEXT.JS, MONGODB

- Built and deployed a full-stack art marketplace on Vercel with MongoDB Atlas, production environment configuration, and health-check endpoints.
- Implemented role-based authentication using NextAuth.js and bcrypt for artists and customers with distinct workflows.
- Created REST APIs with Zod validation for secure, type-safe handling of artworks, commissions, and user authentication.

EDUCATION

RMIT UNIVERSITY

Master of Information Technology

July 2024 - June 2026

Melbourne, Australia

LJ INSTITUTE OF ENGINEERING AND TECHNOLOGY

Bachelor of Information Technology

July 2019 - June 2023

Ahmedabad, India

CERTIFICATION

- Docker Foundations Professional Certificate - [Docker](#), [LinkedIn Learning](#)

HONOURS

- Secured 2nd place in a college programming competition among 100+ participants.
